The amendment filed March 29, 2006 has been entered and made of record as paper no. 0306.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cappelletti et al (US 6,576,950 B1, of record) in view of Shum et al (US 6,628,544 B2).

Cappelletti discloses in figures 12-13 a nonvolatile semiconductor memory device comprising a semiconductor substrate (3), a first well and a second well (104 and 109) spaced apart from the first well, a pair of impurity diffused regions (5 and 14) formed at first well to serve as source/drain, a floating gate (9c), a tunnel insulating layer (8), and an impurity diffused control region (6). Shum discloses in column 3, lines 58-63 that the impurity diffused regions can be formed of n-type or p-type. Therefore, it would have been obvious to one of ordinary skill in the art to form a pair of p-type impurity diffused regions by changing all of the impurity regions in Cappelletti's device to opposite conductivity type as taught by Shum et al.
